London, UK

SKILLS

- React.js, Next.js
- JavaScript, TypeScript
- Java (Spring & SpringBoot)
- Python (FastAPI)
- Node.js
- Scala
- GitHub, GitHub Actions
- Jenkins
- SPARQL
- SQL, Firebase, MongoDB
- GCP, AWS
- OpenAI, Assembly AI
- ASR model fine-tuning & creation

SAMUEL ASHRAFF

FULL-STACK DEVELOPER ENTHUSIASTIC ABOUT DEVELOPING SCALABLE, USER-FRIENDLY WEB APPLICATIONS

PROFESSIONAL PROFILE

Ambitious Software Engineer with a master's degree in Computer Science from Aalto University, Finland, (**Finland's No.1 ranked university overall and in Engineering & Technology**) with over four years of combined industry experience. Proven success in building web applications with CI/CD pipelines, implementing automated testing, and direct client collaboration. Known for a hands-on, collaborative approach and a strong sense of ownership from concept through to deployment.

WORK EXPERIENCE

Apr 2025 - Present

- Took a planned gap year focused on skill development and personal projects.

Software Developer at Profium, Espoo, Finland

Sep 2021 - Apr 2025

- Progressed from a part-time trainee role to full-time full-stack developer, delivering full-stack features with Java (Spring), React, and Jenkins CI/CD pipelines in an Agile and Test-Driven Development Environment.
- Served as the main technical point of contact for several customer projects in a high-ownership role, delivering several end-to-end features and ensuring prompt resolution of reported issues.
- Completed master's thesis in collaboration with the company, researching state-of-the-art Automatic Speech Recognition (ASR) technologies and their practical applications using OpenAI's Whisper, Assembly AI, and Vosk, as well as AWS.
- Performed customer data migration from external systems.
- Spearheaded development of automated testing using Robot Framework and JUnit resulting in reduced manual testing.

Software Engineer Trainee at IOXIO, Helsinki, Finland

Jun 2020 - Aug 2020 & Jun 2021 - Sep 2021

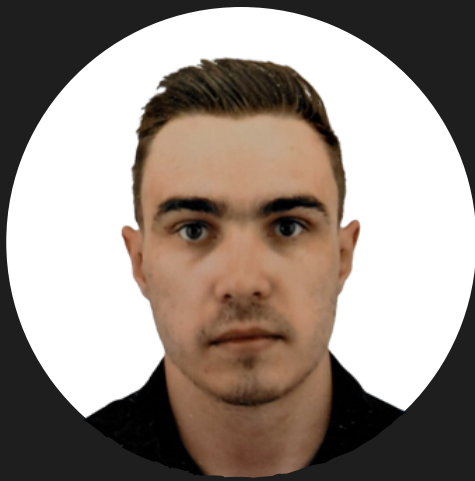

- Delivered a data definition view tool built with Next.js and Python in an Agile development environment.
- Worked with Azure CI/CD pipelines.
- Helped deliver a real-time prototype API interface for the Finnish Tax Administration using FastAPI, Firestore, and the OpenAI Swagger Standard.

EDUCATION

Master of Science and Technology, Computer Science, Aalto University, Espoo, Finland 2025

- Master's Thesis Voice-based interaction with digital services centered around Automatic Speech Recognition
- Majored in Web Technologies, Applications, and Science

Bachelor of Science and Technology, Computer Science, Aalto University, Espoo, Finland 2023

PROJECTS

Encounter Engine | [GitHub](#)

Stack → FastAPI, React (TS), CSS, Redis, WebSockets, Docker
2025 | Status → Under Development

- Currently building a full-stack web application to aid Dungeons and Dragons (DnD) groups with visualizing combat situations on a canvas board when playing together remotely.
- The backend is built with a **FastAPI** RESTful API that also handles **WebSockets** connections between the other players in each session.
- The frontend is built with **React (TypeScript)** providing a responsive and clean UI for the users.
- The database chosen is **Redis** due to its high-speed in-memory capabilities.
- Using **Docker** and **docker-compose** to streamline building of the application and to ensure compatibility across all OS systems.

Profile Website | [GitHub](#) | [Web](#)

Stack → React (TS), CSS, Github Actions, Github Pages
2025 | Status → Completed

- Built a static personal Profile website, showcasing my experience and my skills using **React (TypeScript)** and **CSS**.
- The project is hosted on **GitHub Pages** using automated deployment pipelines via **GitHub Actions**.

REST-to-GraphQL Migration | [GitHub](#)

Stack → Koa (TS), React (TS), SQLite, GraphQL, Docker
2023 | Status → Completed

- An academic project built as part of a university course, where the objective was to provide a direct comparison between RESTful APIs and **GraphQL**.
- The project is a course planner web application using **Koa (TS)**, **React (TS)**, **Tailwind CSS**, and **SQLite**.
- First built with a RESTful API and then transformed to use GraphQL. This was accomplished collaboratively with group members.
- A short research paper was also crafted from this project.

Event Planner | [GitHub](#)

Stack → React (JS), Firebase, CSS
2023 | Status → Completed

- An academic project built as part of a university course, where we built an event planner application using **React.js**, **Firebase BaaS platform**, and **CSS**.
- The project was hosted using Firebase Hosting as part of the evaluation.

HOBBIES & INTERESTS

Outside of work, I'm passionate about weight lifting, running, swimming, and hiking. I also enjoy tennis and bouldering.
